A complete range of tail lifts
In 2008, DHOLLANDIA celebrated 40 years of innovation, production and practical experience.

Since its launch in the pioneering years of hydraulic tail lifts, DHOLLANDIA has grown from a small local Belgian player to one of the largest tail lift manufacturers in Europe. Today, this family-owned company can claim outstanding business records:

- production of more than 28,000 units/year, and more than 400,000 tail lifts produced since 1968
- unparalleled product range with lift capacities ranging from 250 to 16,000 kg
- production sites in 4 countries and a professional network covering more than 40 countries worldwide
- more than 40 years of continuity, stability and security for our respected clients and suppliers

This strong basis is a stepping stone for the future. Together with our continuous innovation and development efforts, plus our energetic corporate dynamics, it enables us to offer a complete range of products distinguished by:

- superior quality
- uncompromising safety and stability
- enhanced durability and smarter maintenance
- increased flexibility to suit all specific requirements
- simplified mounting procedures
Technology

Competitive lead through technology and in-house production

Compared to many competitors who mostly purchase and assemble prefabricated parts, DHOLLANDIA is a tail lift manufacturer in the true sense of the word: more than 90% of parts used are produced in-house.

With direct control over design, (R&D) prototyping and the manufacturing chain, and through use of cutting-edge technologies in CAD-CAM, metal machining centres (1) and surface treatment technologies (2), DHOLLANDIA has gained a substantial edge in a number of areas:

- direct control over product specifications and resulting quality
- high degree of independence and short lead times
- enormous flexibility to turn new ideas quickly and accurately into reality

(1) tube and plate lasers, welding and forming robots, CNC turning & milling machining centres, factory automation...
(2) zinc-phosphatation, KTL e-coat, powder coatings

Flexibility

Small enough to care, big enough to cope

Small enough to provide you with personal services and tailored products, but also big enough to implement your largest projects quickly and accurately.

On the one hand, DHOLLANDIA offers an extensive range of standard tail lifts that, through numerous selectable parameters and options, closely meets your most stringent requirements regarding fittings and use, and perfectly covers the majority of common transport applications.

On the other hand, DHOLLANDIA is also the expert in tailor-made products while at the same time offering the necessary flexibility and production capacity to develop creative client-oriented solutions, for instance:

- truck-trailer combinations with draw-bar coupling
- silent tail lifts for night time distribution
- customised safety devices, safety gates and load restraints
- tailor-made column lifts for multi-deck vehicles
- ...
DHOLLANDIA deliberately selects high-quality materials and uses state-of-the-art technologies for surface treatment and corrosion protection to maximise the durability and aesthetics of its tail lifts. For instance:

- all articulation points are equipped with heavy duty low maintenance bearings
- all articulation pins are zincplated and chromed, or treated with KTL e-coat
- most types of hydraulic cylinders contain hard-chromed stainless steel (INOX) piston rods that guarantee maximum protection against corrosion
- the unique Protection PLUS paint finish combines innovative technologies such as zinc-phosphatation, KTL cationic electro coating by submersion, and polyester powder coats to raise the quality of DHOLLANDIA tail lifts to the highest level
Safety & Reliability

Central building blocks of every DHOLLANDIA tail lift

Safety and reliability go hand in hand and take a central position in every new design. DHOLLANDIA’s clients rightfully have high expectations regarding the functionality of the lifts supplied. These expectations are fully met, on the one hand through a high degree of vertical integration in production and quality care; on the other hand through our conscious approach to intelligent simplicity. These are just a few of our smart solutions that really make the difference:

- accurate dimensioning of mechanical components in relation to lifting capacity and application
- simple electrical operation without fragile electronic components; easy to maintain without in depth knowledge
- focus on robust 4-cylinder tail lifts that guarantee maximum stability and durability
- electrical safety valves mounted to all cylinders
- manual emergency operation on all electrovalves
- automatic tilt at ground level
- electric motor with thermal cut-out fuse to protect against overheating

Environment

Green aspects of this orange company

In order to limit the impact of the company’s actions on the environment, DHOLLANDIA operates a policy that evaluates the ecological consequences of its operations and constantly questions routine work methods. This active care for a better environment is clearly demonstrated by, amongst other things:

- Protection PLUS anti-corrosive finish with zero emissions, through use of Best Available Technologies regarding wastewater treatment
- application of rainwater for industrial processes
- maximum elimination of lost packaging material and use of reusable transportation frames
- biologically degradable hydraulic oil, promoted as an option
- intelligent logistics management systems
- partial use of green energy (wind and solar) for production
Service

Professional network in more than 40 countries

Today, DHOLLANDIA is a multinational group with production facilities in 4 countries and a professional distribution and service network stretching out over more than 40 countries globally. DHOLLANDIA caters for international transport and logistics companies, fleet owners, leasing and rental companies, body builders and chassis manufacturers:

- sales & commercial consultancy
- technical services: maintenance, repair and road-side assistance
- supply of tail lifts and spare parts
- fitting and fitting assistance
- professional technical and operator training on all tail lift types

See www.dhollandia.com for our worldwide network.
Excellent standard specification (1)

**DHOLLANDIA control box**
- Without electronic components
- Logical and ergonomic
- Safe 2-hand control with joy-stick
- Main battery power isolator switch with removable key

**Low-noise hydraulic power pack**
- Mounted outside the lift beam for easier maintenance, less susceptible to failure
- Quick and easy access to all components
- Insulated noise-dampening cover

**High quality hydraulic cylinders**
- Piston rods in hard-chromed stainless steel (INOX)
- Electromagnetic safety valves on all cylinders
- Manual emergency operation on all electrovalves

**Synthetic platform rollers**
- Protects the platform against wear and tear
- Protects the floor against damage

**Automatic tilt at ground level**
- Works smoothly and avoids human error
- The platform orientation can be adjusted to suit the slope of the ground

**Bolt-on mounting plates**
- No welding required to fit the lift
- Protection PLUS paint finish remains intact

(1) Deviations are possible depending on the type of product and its execution
Passenger lifts - wheelchair lifts

DH-PH2 350-500 kg
Linear 2-arm lift

Cassette slider lift

DH-CH 300 kg

Taxi lift
